                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            human 7-transmembrane G-protein coupled receptor. HNFD220 polymucleotides human 7-transmembrane G-protein coupled receptor. HNFD220 polymucleotides may be obtained from CDNA libraries derived from mRNA in cells of human testis and human liver using expressed sequence tag analysis. The invention relates to HNFD220 polypeptides and recombinant materials and methods for their production. It also provides methods for using such polypeptides and HNFD220 polypeptides and recombinant of infections such as bacterial, fungal, protezona and particularly HIV-1 or HIV-2 infections, and conditions including pain, cancers, anorexia, asthma, carchinor, as bacterial, fungal, protezona and particularly HIV-1 or HIV-2 infections, and sease, acute heart failure, hypotension, hypertension, ulcras, allergies, benign prostatic hypertrophy, and psychotic and neurological disorders, including anxiety, schizophrenia, manic depression, delirium, demential, severe mental retardation and dyskinesias, such as Huntingdon's disease or Gilles de la Tourette's syndrome. Gene therapy using RNA encoding HNFDZ20 can be used to treat conditions caused by under-expression of the protein. The invention also relates to methods of identifying agonists and antagonists and for using such compounds to treat conditions associated with inappropriate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    334 GTTCGTCTTCTCGGTGTACCTTCTCACTTTCCTGGTGGGGCTCCCCCTCAACCTGCTGCTGGC

The invention relates to constitutively active, non-endogenous versions of endogenous human orphan G protein-coupled receptors (GPCRs, AAY96643-AAY90683-Y90687), and to DNA encoding them (AAA30708-A330743 and AAA30775-A30779). The mutant proteins of the invention contain a matation in a portion of the protein comprising intracellular loop 3 (CC) and transmembrane domain 6 (TM6). A non-endogenous amino acid, X, is substituted for an endogenous residue in IC3 at a position 16 amino acids N-terminal of an endogenous proline in IC3 at a position 16 amino acids N-terminal of an endogenous proline in TM6 to form a sequence X-CC (AA)15-Pro. The endogenous amino acid is selected from Lys, His, Arg or Ala, and is preferably Lys. When the endogenous residue at this position is Lys, this residue is replaced by His, Arg or preferably Ala. The 15 amino acid stretch between the substituted amino acid and the Pro may be endogenous, non-endogenous, or a mixture of endogenous and non-endogenous credidues. The constitutively active GPCRs are useful for identifying antagonists and partial agonists for use as pharmaceutical captured are appeared by the receptors in normal and diseases and disorders associated with that receptor. Because the novel mutant GPCRs are constitutively active, they can be useful for treating diseases and disorders associated with that receptor. Because the novel mutant GPCRs are constitutively active, they can be used directly for screening of compounds without the need for endogenous ligands. The present sequence constitutively active, they can be used directly for screening of exemplification of the invention. This was cloned and subjected to site-directed mutagenesis (SDM) to generate DNA encoding the constitution of the invention. This was cloned and subjected to site-directed mutagenesis (SDM) to generate DNA encoding the constitution of the invention.
                                                                                                                                                                                                  Non-endogenous constitutively activated human G protein-coupled receptors, useful for identifying agonists for use as pharmaceutical
                                                                                                                                                                                                                                                                                                                  Example 1; Page 309-310; 341pp; English.

Homo sapiens.

Identification of an agent for the modulation of G-protein coupled receptor useful for the treatment of disease i.e. dyslipidemia or stoke.

P-PSDB; AAB82759

Claim 16; Page 46-47; 53pp; English.

The present sequence is that of cDNA encoding human G-protein coupled receptor 42 (GPR 42, see AAB82759). The invention is based on the finding that expression of GPR 42 and GPR 41 (see AAB82758) is restricted to adipose tissue. GPR 41 or GPR 42 may therefore be used as a screening target for the identification and development of novel pharmaceutical agents for use in inhibiting lipolysis. Methods are claimed for identifying agents that modulate GPR 41 or GPR 42 activity, involving: (1) contacting a test agent with GPR 41 or GPR 42 or a variant capable of

```
in the presence of a G-protein, thereby determining whether the test agent modulates activity. Such agents, which may be an activator of GPR 41 or GPR 42, an inhibitor of lipolysis, or a polymucleotide encoding GPR 41, GPR 42 or variant polypeptide, are useful for the treatment of dyslipidaemia, coronary heart disease, atherosclerosis, thrombosis or obesity, angina, chronic renal failure, peripheral vascular disease, stroke, type II diabetes or metabolic syndrome (syndrome X) (all claimed)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               137
coupling to a G-protein; and (2) monitoring for GPR 41 or GPR 42 activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      45 GTTCGTCTTCTCGGTGTACCTTCTCACTTTCCTGGTGGGGCTCCCCCTCAACCTGCTGGC 104

/clone lib="NIH MGC_125"
/note="Organ: ovary (pool of 3); Vector: pCMV-SPORT6;
/note="Organ: ovary (pool of 3); Vector: pCMV-SPORT6;
stc_1: EcoRV (destroyed); Site_2: Not1; RNA source pool of three ovaries, from females ranging in age from 38 to 49 yo. Library is oligo-dT primed and directionally cloned (EcoRV site is destroyed upon cloning). Average insert size 2:1 kb, insert size range 1-3.5 kb. Library is normalized and enriched for full-length clones and was constructed by C. Gruber (Invitrogen). Research Genetics tracking code 036."

/note="Vector: pDNR-Dual; Site_1: loxP-Sall; Site_2:
loxP-HindIII; Clones from this! library have been
PCR-amplified using gene-specific primers to contain the
PCR-amplified using gene-specific Primers for Rise DNA,
derived from with Refeeq. Template for PCR is EDNA,
derived from either pooled total RNA from 10 different tissues
(from BD Biosciences/Clontech and Mashington University).
PCR products are directionally cloned into the loxP sites
of the pDNR-Dual vector. Library constructed by Dr.
Narayan Bhat, Barl Bere III and Hongling Liao (Gene
Expression Laboratory, Research Technology Program, SAIC
Frederick, NGI-Frederick, Frederick, MD 21702). For
information on which gene each clone represents, please
visit our annownous fig site at

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Description

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 6
